Customer Journey Map

End-to-end interaction across authentication, weather and intelligence

Project: AI WeatherWise API   Track: AI-ML & GEN-AI Track

Prepared: 07 October 2026   Team ID: Not provided

Maximum Marks: 2

Team Members & Assigned Roles

Team Member	Role
Jai Bharath A	Team Lead & Lead Backend/API Architect
Mukesh Balaji	Generative AI & Prompt Engineering Engineer
Yadagiri Mani	Database & Data Engineering Specialist
Deepak G	Security, Testing & Reliability Engineer
Naveen	API Integration, Documentation & Demonstration Engineer

Stage	User action	Touchpoint	Thought / feeling	System ownership	Improvement opportunity
1. Auth & Onboarding	Register, login, inspect profile	/register, /login, /profile	“I want secure access.”	Auth controller + JWT middleware	Clear validation errors
2. Weather & Favorites	Query city, save/list/update/delete	/weather/:city + /locations	“I want my common places ready.”	Weather service + Location model	Caching and richer metadata
3. AI Intelligence	Request summary/recommendation	/weather-summary + /weather-recommendation	“Tell me what this means.”	AI service + fallback rules	Personalization and multilingual output

Journey-to-Requirement Mapping

Journey need	API capability	Evidence / outcome
Secure onboarding	bcrypt + JWT	Authenticated protected requests
Fast weather lookup	OpenWeatherMap proxy	Live data with deterministic fallback
Personal continuity	Favorites CRUD	User-isolated locations
Understandable advice	Gemini 2.5 Flash	Natural-language summary
Actionable decisions	Recommendation endpoint	Outfit, commute, hydration guidance

Key Journey Principle

Minimize cognitive load: the user should move from city selection to an actionable recommendation with as few steps as possible. The API therefore separates raw observation retrieval from interpretation, allowing clients to use either layer independently.
